PROFESSIONAL EXPERIENCE

Vap Technologies (Full-time) - Software Engineer Sep 2024 - To Date

- Built and maintained a fintech-based content monetization platform enabling content creators to receive fan tips through a seamless payment flow, improving transaction reliability, system stability, and user experience across the platform, while deepening expertise in payment systems, backend architecture, and scalable financial application design.
- Designed and developed fullscale supply chain management system integrating inventory control, regional sales assignment, and logistics coordination, enabling optimized route assignment, real-time journey tracking with timestamped events, and secure role-based access for administrators, salespersons, and drivers, while strengthening expertise in system architecture, workflow automation, and enterprise-grade application design.
- Engineered a two-sided marketplace platform connecting clients and writers, enabling task bidding workflows and integrating Stripe for secure payments and payouts, resulting in improved transaction reliability, streamlined user interactions, and increased platform engagement, while deepening expertise in fintech integrations, marketplace systems, and scalable backend design.

View Tech Limited(Sasapay), Nairobi, Kenya(Contract) - Full Stack Developer Oct 2022 - june 2024

- Contributed to the development of a Revenue Management System, integrating RESTful APIs and supporting frontend delivery with React to enhance data accessibility and usability, improving system efficiency for end users, while building skills in API design, system integration, and full-stack development.
- Led backend enhancements during a Merchant Portal redesign, implementing automated settlement processes and optimized payment flows, resulting in a 4% increase in merchant participation and improved transaction efficiency, while deepening expertise in fintech systems, payment processing, and scalable backend architecture.
- Engineered a payment integration between Sasapay and Jambo pay, enabling secure and reliable utility transactions for services including electricity tokens, airtime, and water bills, significantly improving transaction success rates and user experience, while deepening expertise in fintech integrations, payment processing, and scalable backend architecture.
- Engineered integration of JIA APIs within a lending platform, enabling automated loan processing, real-time funding notifications, and repayment reminder systems, driving increased user engagement and streamlining the end-to-end borrowing lifecycle, while deepening expertise in fintech integrations, asynchronous workflows, and scalable backend architecture.

- Led frontend development of the “Jazia” feature in Sasapay, integrating backend APIs and designing seamless user flows that enabled transaction continuation under insufficient balance conditions, increasing transaction completion rates and enhancing platform usability, while deepening expertise in fintech product design, API-driven development, and scalable full-stack architecture.
- Engineered “E-mandate” and “Auto-settlement” capabilities in the Merchant Portal, implementing automated billing deductions and scheduled fund transfers to optimize payment workflows, enhance transaction reliability, and attract international users, while deepening expertise in payment automation, financial systems design, and scalable backend engineering.

Vap Technologies, Nairobi, Kenya (Full Time) - *Software Developer Feb 2021 - Oct 2022*

- Contributed to the design and development of RESTful APIs for an HR Information System (HRIS) using Django Rest Framework, implementing secure authentication, optimized data models, and robust CRUD operations to support scalable HR workflows and reliable data management, while deepening expertise in backend engineering, API architecture, and secure system design.
- Contributed to the maintenance and enhancement of logistics applications, resolving critical bugs, improving system stability, and implementing new features to optimize performance and operational efficiency (Result), while deepening expertise in production-level debugging, system reliability engineering, and full-stack application optimization (Learning).

Cal Kenya(Viusasa), Nairobi, Kenya (Contract) - *Software Developer Aug 2018 - Jan 2021*

- Developed a high-performance React-based user interface for a Citizen Digital application, implementing Redux for centralized API state management, React memoization and virtualization for large dataset optimization, and custom hooks for reusable asynchronous data handling, improving performance, scalability, and user experience, while deepening expertise in advanced frontend architecture, state management, and performance optimization techniques.
- Played a key role in maintaining and enhancing production applications, diagnosing and resolving critical issues related to UI rendering, performance bottlenecks, API integration, and cross-browser compatibility using Chrome DevTools and React DevTools in collaboration with QA and backend engineers, leading to improved application stability and reduced crashes (Result), while deepening expertise in production debugging, performance engineering, and cross-team software delivery.

SKILLS

Languages - Python, JavaScript,

Framework - Django, Node, Express, React js, TypeScript, Next.js

Database - Mysql, Postgres, Mongodb, Redis

Devops - Git, Docker, Kubernetes, Aws, CI/CD

Monitoring - Prometheus, Sentry, Locust

EDUCATION

Moringa School, Kenya

2020

Software Development

Amigos code, Online

2024

System Design

Nairobi Devops, Kenya

2025

Devops
